

Y.E.S. is a hands-on science adventure!

There is currently nothing like the Youth Experiences in science curriculum for providing high quality, children's science education in after school settings. The Curricula incorporates cross-age teaching, inquiry-based activities combined with cooperative learning; focuses on scientific thinking processes; and features the learning cycle of instruction. The Y.E.S. curricula set offers more than 250 planned, thematically linked science education experiences that are geared

5-to-8 years of age and childcare providers. The activities have real-life applications and use inexpensive and readily available materials. Each unit includes five to ten days of activities, a family science activity booklet, and science learning center activities (800 pages).

The Curricula set has seven science discovery units and includes a *Teen Recruitment and Orientation Guide* that gives a training outline designed to provide step-by-step assistance in organizing and presenting a successful teen Y.E.S. training along with handout materials and visual aides that can be easily duplicated.
